# Java project

Student :Goudelin Richard
student id: 2022319281

First of all here is the Er model of my database:

Second, here is how to use the project:

-run the ddl.sql file (in the src folder)
-run the data.sql file (in the src folder)
-run the .jar file named projectJava.jar:

his path is out->artifacts->projectJava_jar
open a terminal at this folder and type:
java -jar projectJava.jar `jdbc:mysql://localhost:3306/project myid mypassword`

And there you go.

Now an explanation on the menu:
    1) to login i suggest you to login as
email: cal@gmail.com
password : Cal1
because it is the most relevant to do test
    2) to create an account just follow the steps
    3) to login as an administrator:

email: admin@admin
password: admin

Now you can do any test you want.

Thanks for this project it has been really relevant to study.
Sincerely, Richard Goudelin.
